

XENON EVO

A new chair with a different philosophy in the wide range of EUROCLINIC fully motorized chairs.

XENON EVO is indeed characterized by a **Telescopic Column** granting a vertical lifting with a wider excursion between the minimum and maximum position, making the chair the best choice for examination both on adults and on children patients, always ensuring an easy access to patients.

The maximum stability is always granted thanks to the 360° rotation (manual) at the base level, lockable/unlockable through a dedicated button on the **foot pedal** that, activating an **Electronic Signal**, grants an easy and quick rotation, avoiding interruption during the normal working procedures of the Doctors.

Pre settled backrest position at +3° to facilitate ENT examination.

Control of all motorized chair's movements by foot-control (wireless optional) or, if combined to an Euroclinic treatment unit, in wireless remote control from unit's touch screen.

Upholstered single leg-rest, provided with folded **foot-rest with reduced dimensions** (14 cm) and equipped with "over-load" safety system.

All the desired positions can be quickly reached thanks to a multi-functional foot control with possibility to set 3 memories (at customer's choice) along with M0 button to recall entry/exit position.

Xenon Evo is available in many different colors. Articulated head-rest mechanism to adjust head support in all dimensions (vertical and inclination) for a perfect adaptability to the patient's morphology.
